Application/Control Number: 10/024,674

Art Unit: 1753

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 1-12, drawn to a method of classifying particles, classified in class 204, subclass 450.
  - II. Claims 13-21, drawn to a device and a system for classifying at least two charged particle types, classified in class 204, subclass 600.
  - III. Claims 22-25, drawn to a process for making a particle classifier, classified in class 216, subclass 52.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus, such as a 2-dimensional polyacrylamide gel electrophoresis apparatus, a laser assisted desorption ionization mass spectroscopy apparatus, or a capillary gel electrophoresis apparatus, etc.
- 3. Inventions Group III and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the process as claimed can be used to

Application/Control Number: 10/024,674

Art Unit: 1753

make other and materially different product, such as a device for analyzing biological samples wherein the material in which the conduit is formed is a conductive or semiconductive material, rather than a dielectric material.

The method of classifying particles in Group I is distinct from the method of making a particle classifier in Group III because a prior art reference that anticipates or renders obvious the method of classifying particles cannot necessarily be used to anticipate or render obvious the method of making a particle classifier. Alternatively, a prior art reference that anticipates or renders obvious the method of making a particle classifier cannot necessarily be used to anticipate or render obvious the method of classifying particles.

- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.
- 6. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I or III, restriction for examination purposes as indicated is proper.
- 7. Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Group I or III, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/024,674

Art Unit: 1753

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alan Diamond whose telephone number is 571-272-1338. The examiner can normally be reached on Monday through Friday, 5:30 a.m. to 2:00 p.m. ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen can be reached on 571-272-1342. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
